Certain college students are at increased risk for meningococcal disease, a potentially fatal bacterial infection commonly referred to as meningitis. In fact, freshmen living in dorms are found to have a six fold increased risk for the disease. A U.S. health advisory panel recommends that college students, particularly freshmen living in residence halls, learn more about meningitis and vaccination.

- **What is meningococcal meningitis?** Meningitis is rare. But when it strikes, this potentially fatal bacterial disease can lead to swelling of fluid surrounding the brain and spinal column as well as severe and permanent disabilities, such as hearing loss, brain damage, seizures, limb amputation and even death.

- **How is it spread?** Meningococcal meningitis is spread through the air via respiratory secretions or close contact with an infected person. This can include coughing, sneezing, kissing or sharing items like utensils, cigarettes and drinking glasses.

- **What are the symptoms?** Symptoms of meningococcal meningitis often resemble the flu and can include high fever, severe headache, stiff neck, rash, nausea, vomiting, lethargy and confusion.

- **Who is at risk?** Certain college students, particularly freshmen who live in dormitories or residence halls, have been found to have an increased risk for meningococcal meningitis. Other undergraduates can also consider vaccination to reduce their risk for the disease.

- **Can meningitis be prevented?** Yes. Safe and effective vaccines are available to protect against four of the five most common strains of the disease. The vaccine called Menomune provides protection for approximately three to five years. A newer vaccine called Menactra is also now available. Either vaccine is acceptable. As with any vaccine, vaccination against meningitis may not protect 100 percent of all susceptible individuals.

- **Does Piedmont College offer the meningococcal meningitis vaccine on campus?** No, the college health service does not offer the vaccine at this time. Please check with your local County Health Department or family doctor to obtain the meningitis vaccine. Be aware that students who are under 19 years old can usually get the vaccine at a much lower cost than those nineteen or over.

**For more information:** You can also visit the websites of the Centers for Disease Control and Prevention (CDC), [www.cdc.gov](http://www.cdc.gov) or the American College Health Association, [www.acha.org](http://www.acha.org).
I acknowledge that I have received and read the information about meningococcal meningitis.

☐ I have already received the meningitis vaccine: Date ________________

☐ I will make my own arrangements to receive the meningitis vaccine.

☐ I am not interested in receiving the meningitis vaccine.
